GENERAL INFORMATION

PRODUCT RANGE

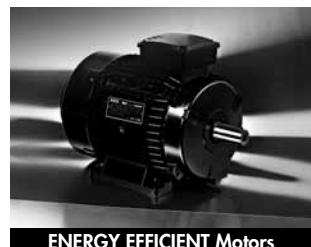

MISSION

For 50 years the Lafert Group have been committing to continuous growth by being the global leading manufacturer of **Customised Engineered Electric Motors and Drives** with special focus on **Industrial Automation, Energy Saving and Renewables**.

The Group have developed an excellent ability to adapt the highest quality standards to any specific market demands providing solutions for several applications and OEM requests.

The Lafert Group's range of products is divided in 5 product sectors:

ENERGY EFFICIENT Motors, three-phase motors high efficiency, IE2 and premium efficiency, IE3

ENERGY EFFICIENT Motors

CUSTOMISED Motors, single-phase, three-phase and brake motors in special execution

CUSTOMISED Motors

HIGH PERFORMANCE Motors, permanent magnet synchronous motors and generators as well as the relevant drives

HIGH PERFORMANCE Motors

SERVO Motors & Drives, brushless servomotors and drives for industrial automation

SERVO Motors & Drives

LIFT Motors, permanent magnet synchronous gearless machines for elevators

LIFT Motors

PRODUCT RANGE

ENERGY EFFICIENT MOTORS

HIGH EFFICIENCY, ENERGY SAVING

The range of **Energy Efficient Motors** has been developed to meet the increasing demand for **increased energy efficiency and energy saving products** in Europe, North America and Australia after the introduction of directives imposing **higher minimum efficiency levels**.

IE2
IE3

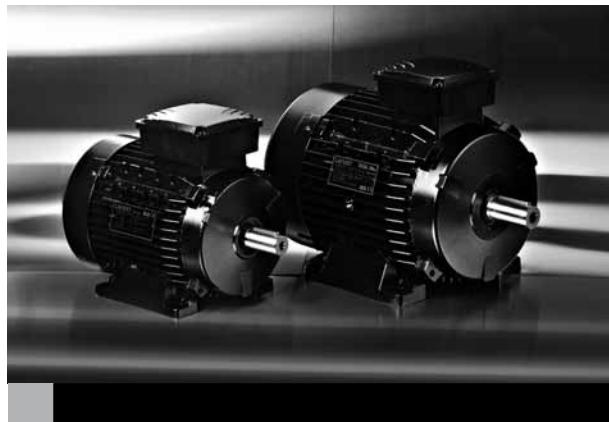

High Efficiency and Premium Efficiency Three-phase Motors up to 200 kW meeting the requirements of IE2 and IE3 internationally efficiency levels in accordance with **IEC 60034-30;2008** and test method IEC 60034-2-1;2007.

Motors conforming to the higher efficiency standards for the North American market in accordance with **EPAcT Regulation** (Energy Policy Act, 1992) and **EISA Directive** (Energy Independence and Security Act, 2007).

In addition these motors are verified by **UL Underwriters Laboratories Inc.**.

The range of Energy Efficient Motors from Lafert is the first complete range of IE2 and IE3 motors available to worldwide Industry.

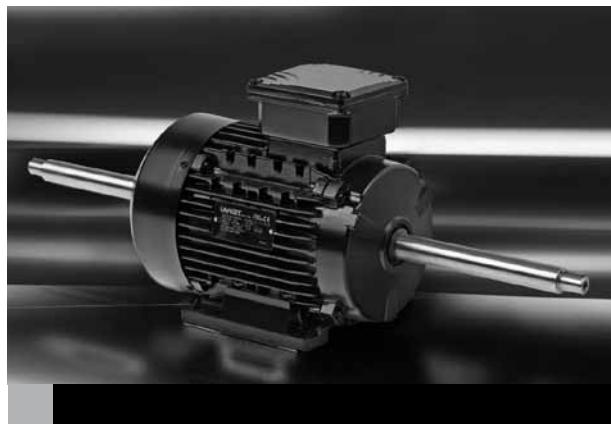

PRODUCT RANGE

CUSTOMISED MOTORS

CUSTOMISATION, OUR CORE BUSINESS

A wide range of **Customised Motors** with **special execution**, in order to optimise electrical and mechanical design for particular markets or specific OEM requests.

Single-phase, Three-phase and Brake Motors manufactured ad hoc for non-standard applications according to **customer's demands**: customised flanges and shafts, special electrical design for each duty request, complete tailor-made design, AC or DC brake coil to fit any applications, solutions to special environmental conditions (Smoke and Heat Exhaust Ventilation, Dust Ignition for Zone 22, Non Sparking Exn).

PRODUCT RANGE

HIGH PERFORMANCE MOTORS

PERMANENT MAGNET SYNCHRONOUS MOTORS SIGNIFICANTLY REDUCE ENERGY COSTS

High Performance is a range of **PM synchronous motors** 0.37 kW to 22 kW, with variable speed and equipped with sensorless drives. By combining the technology of both brushless servo motors and AC motors, this range achieves the highest efficiency level **IE4 – Super Premium Efficiency** and is specifically designed for its energy saving potential and renewable energy applications.

Permanent magnet technology, very high efficiency, compact design, reduced weight, low operating temperature.

A separate catalogue is available.

PRODUCT RANGE

SERVO MOTORS & DRIVES

A MODERN AND COMPLETE RANGE FOR INDUSTRIAL AUTOMATION

The range of **Brushless Servo Motors** is one of the most complete available on the market, with nominal torques 0.20 Nm to 150 Nm. **Direct Drive Motors** cover torques 10 Nm to 500 Nm.

Thanks to its whole integrated manufacturing process, Lafert is one of the few independent manufacturers of servo motors and can supply a wide range of standard and tailor-made products for **Industrial Automation** giving **excellent flexibility** and high level of **cost efficiency**.

The family of **Servo Drives** is especially engineering for brushless servo motors and DC motors providing **particular versatility** and **adaptability** when designing automated industrial machines.

These products ensure high reliability and are subjected to strict tests in different loads and climatic conditions.

A separate catalogue is available.

PRODUCT RANGE

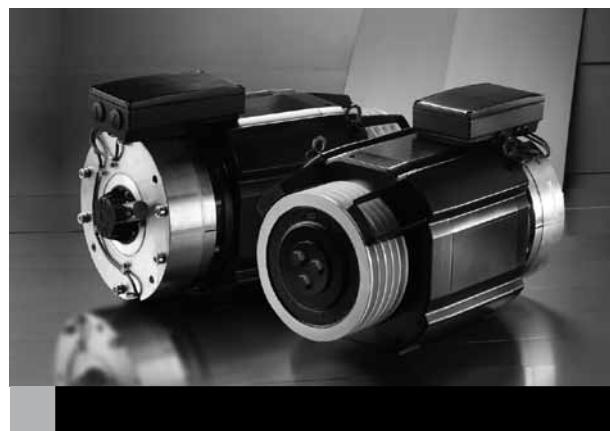

LIFT MOTORS

GEARLESS MACHINES FOR ELEVATORS

The **Lift** range allows the manufacturing of systems where the traction machine is inside the elevator shaft, so there is no need for a machine room, with obvious **space and cost savings** and a more **rational layout** of the all components.

Permanent Magnet Gearless Synchronous Machines with compact design, reduced energy consumption, low noise level, high comfort and requiring less maintenance. Motors with torque up to 660 Nm for systems with a capacity load up to 1,275 kg, machines with TÜV SÜD Certifications, in compliance with the Specifications EN 81-1 and Lifts Directive 95/16/EC.

A separate catalogue is available.

STANDARDS AND REGULATIONS

QUALITY SYSTEM CERTIFICATE

The strictness of our quality control assures the flawless operation and reliability of our products. Our quality is confirmed by the **Certificate ISO 9001** awarded by CERMET, a certification body authorized by ACCREDIA.

SAFETY STANDARDS

Our motors comply with the requirements of the International Standard **IEC 60034** for rotating electrical machines as well as with the following European Directives: **Low Voltage Directive (LV)** 2006/95/EC, **Electromagnetic Compatibility Directive (EMC)** 2004/108/EC and **RoHS Directive** 2002/95/EC on the restriction of hazardous substances in electrical and electronic equipment.

All products comply with the requirements of the **Directive Machines (MD)** 2006/42/EC. In accordance with this Directive, induction motors are components and intended solely for integration into other machines. Commissioning is forbidden until conformity of the end-product with this Directive is proved.

The CE marking was applied for the first time in 1995.

When operating the motor, the observance of the Regulation EN 60204-1 and safety instructions indicated in our Operating Instructions must be complied with.

Motors complied with many other international standards are available on request:

Motors approved by UL Underwriters Laboratories Inc.

Motors approved by CSA

Motors approved by CQC (small motors up to 1.1 kW – AM, AMBY, AMF series)

EFFICIENCY STANDARDS

IE1 IE2 IE3

Efficiencies are harmonized to the **International Standard IEC 60034-30;2008** that states new efficiency levels: Standard Efficiency IE1, High Efficiency IE2 and Premium Efficiency IE3. The efficiency levels are in accordance with the testing method IEC 60034-2-1;2007.

High Efficiency motors according to **EPAct** legislation.
Verified by UL Underwriters Laboratories Inc.

Premium Efficiency motors according to **EISA** Directive.
Verified by UL Environment.

STANDARDS AND REGULATIONS

NEW INTERNATIONAL EFFICIENCY LEVELS FOR MOTORS: IE CODES

The International standard **IEC 60034-30;2008** states the new efficiency levels IE1, IE2 and IE3 for electric motors, ensuring an international common base for motor designing and classification, as well as for national legislative activities.

The efficiency measurement method for motors has also been reviewed.

The new standard **IEC 60034-2-1;2007** provides for test conditions and efficiency measurement methods which are more accurate and replaces the previous standard EN 60034-2;1996.

The efficiency levels provided for by the standard for single speed, three-phase – brake motors included -50 Hz or 50/60 Hz, motors with rated output between 0,75 kW and 375 kW, 2, 4 or 6 poles, on the basis of continuous duty operation S1 or intermittent periodic duty operation S3 are the following:

- **IE1 = Standard Efficiency**
- **IE2 = High Efficiency**
- **IE3 = Premium Efficiency**

However, IEC 60034-30 states only the requirements for the efficiency levels, thus creating shared measures worldwide. It does not state the motors to be supplied or the minimum efficiency level. This depends on any regional laws that are applicable.

EUROPE – ECODESIGN EUP DIRECTIVE (2005/32/EC)

The **EcoDesign EuP directive** (2005/32/CE) states the ecodesign requirements for energy-using products.

It is the **Commission Regulation (EC) 640/2009** that specifies the efficiency requirements for electric motors and that introduces in all countries of the European Community the obligation of the **IE2 minimum efficiency level as from 16th June 2011**.

At further dates, progressively higher minimum efficiency requirements will be established. The IE3 level will come in from 2015-2017.

The scope of the Commission Regulation includes single speed, three-phase 50 Hz or 50/60 Hz, squirrel cage asynchronous motors with rated output between 0.75 kW and 375 kW, 2, 4 or 6 poles, on the basis of continuous duty operation S1.

Motors to be exclusively exported out of the EU (machine distributors or manufacturers) may be produced and distributed with IE1 efficiency level even after 16th June 2011. To that end, a statement will have to be made to the manufacturer.

UNITED STATES, CANADA – EISA ENERGY INDEPENDENCE AND SECURITY ACT, 2007

The **Energy Independence and Security Act, 2007 (EISA)** imposes in the USA and Canada Nema Premium Efficiency (IE3) as minimum level of efficiency as from 19th December 2010.

EISA, which replaces the current 1992 Energy Policy Act (EPAct) legislation, sets out new efficiency restrictive limits for a wide range of three-phase motors, including brake motors with power ratings from 1 to 500 HP.

STANDARDS AND REGULATIONS

GLOBALLY MINIMUM EFFICIENCY STANDARDS

Country	Product range	Law / Regulation	Minimum efficiency level	Next steps
EUROPE	400 V ± 10%; 50 Hz 0.75 - 375 kW - 2-6 poles	EC 640/2009	IE2 compulsory 16.06.2011	01.01.2015 - IE3 from 7.5 to 375 kW or IE2 motor with frequency converter 01.01.2017 - IE3 from 0.75 to 375 kW or IE2 motor with frequency converter
RUSSIA	up to 690 V ± 10%; 50 Hz 1 - 400 kW - All poles	GOST R 51677-2000	-	
SWITZERLAND	400 V ± 10%; 50 Hz 0.75 - 375 kW - 2-6 poles	EnV	IE2 compulsory 01.07.2011	For extension of regulations in 2015 and 2017, Swiss Energy Act will be revised in time
TURKEY	400 V ± 10%; 50 Hz 0.75 - 375 kW - 2-6 poles	EC 640/2009	IE1	No decision yet. Will follow probably the EU timeline state initiative and customer awareness for IE2
USA	460 V ± 10%; 60 Hz 1 - 200 HP - 2-6 poles	Nema EPAct EISA 2007	IE3 compulsory 19.12.2010	
CANADA	460 V/575 V ± 10%; 60 Hz 1 - 200 HP - 2-6 poles	CSA C390	IE3 compulsory 01.01.2011	
MEXICO	460 V ± 10%; 60 Hz 1 - 200 HP - 2-6 poles	Nema EPAct EISA 2007	IE3 compulsory 01.01.2011	Will follow USA model
BRAZIL	220/380/440/460/480 V ± 10%; 60 Hz 0.75 - 250 kW - 2-8 poles	NBR 17094-1 Regulation 553	IE2 compulsory 08.12.2009	
CHILE	380/400/420/440/460/690 V ± 10%; 50 Hz 0.75 Kw - 7.5 kW - 2-6 poles	NCH 3086	IE2 compulsory 04.01.2011	
CHINA	380 V ± 10%; 50 Hz 0.55 - 315 kW - 2-6 poles	GB 18613-2006	IE2 is planned	
HONG KONG	380 V ± 10%; 50 Hz 0.75 - 375 kW - 2-6 poles	Mandatory Buildings Energy Efficiency Bill	IE2 introduction stage since Dec 2009	01.01.2015 - IE3 from 7.5 to 375 kW or IE2 motor with frequency converter 01.01.2017 - IE3 from 0.75 to 375 kW or IE2 motor with frequency converter
INDIA	415 V/690 V ± 10%; 50 Hz 0.37 - 315 kW - 2-8 poles	IS:12615	IE2 compulsory 01.06.2011	IE3 from 01.01.2014
ISRAEL	400 V ± 10%; 50 Hz 0.75 - 185 kW - 2-8 poles	IS:5289	IE2 compulsory 01.02.2008	
JAPAN	200/220/400/440 V ± 10%; 50/60 Hz 0.2 - 160 kW - 2-6 poles	JIS C 4210 JIS C 4212	IE2 expected	No law, efficiency per JIS standards. IEC 60034-30 will be integrated into JIS in 2012
KOREA	up to 600 V ± 10%; 60 Hz 0.75 - 200 kW - 2-6 poles	KS C 4202	IE2 compulsory 01.01.2010	
SINGAPORE	415 V ± 10%; 50 Hz 1.1 - 90 kW - 2-4 poles	SS530:2006	IE2	Only government projects compulsory IE2
TAIWAN	< 600 V ± 10%; 60 Hz 0.37 - 200 kW - 2-8 poles	CNS14400	IE2	No plan to adapt IEC 60034-30. IE2 motors can be certified acc. to CNS 14400 as high efficiency motors
SAUDI ARABIA	380 V/ 460 V ± 5%; 60 Hz all kW - all poles	No regulation	-	
UNITED ARAB EMIRATES	400 V ± 10%; 50 Hz 0.75 - 375 kW - 2-6 poles	No regulation	IE1	No regional standards regarding a minimum efficiency
SOUTH AFRICA	400 V/525 V ± 10%; 50 Hz 0.75 - 375 kW - 2-6 poles	IEC 60034-30	IE1	
AUSTRALIA NEW ZEALAND	415 V/690 V ± 10%; 50 Hz 0.75 - 186 kW - 2-8 poles	AS/NZS 1359.5-2004	IE2 compulsory 01.04.2006	IE3 expected for near future

CONDITIONS OF INSTALLATION

The motors comply with the relevant standards and regulations, especially:

ELECTRICAL	Rating and performance	IEC 60034-1
	Methods for determining losses and efficiency using tests	IEC 60034-2
	Standard method for determining losses and efficiency from tests	IEC 60034-2-1
	Efficiency classes of single speed, three-phase, cage-induction motors (IE-code)	IEC 60034-30
	Terminal markings and direction of rotation	IEC 60034-8
	Starting performance	IEC 60034-12
	Standard voltages	IEC 60038
	Insulating materials	IEC 60085
MECHANICAL	Dimensions and output ratings	IEC 60072
	Mounting dimensions and relationship frame sizes-output ratings, IM B3, IM B5, IM B14	IEC 60072
	Cylindrical shaft ends for electric motors	IEC 60072
	Degrees of protection	IEC 60034-5
	Methods of cooling	IEC 60034-6
	Mounting arrangements	IEC 60034-7
	Noise limits	IEC 60034-9
	Mechanical vibration	IEC 60034-14
	Mounting flanges	DIN 42948
	Tolerances of mounting and shaft extensions	DIN 42955
	Classification of environmental conditions	IEC 60721-2-1
	Mechanical vibration; balancing	ISO 8821

The motors are designed for operation at **altitudes $\leq 1000 \text{ m}$** above sea-level and at **ambient temperatures of up to 40° C** . Exceptions are indicated on the rating plate.

The motors conform to **degree of protection IP 55** to IEC 60034-5. Higher protection on request.

The standard design for horizontal mounting is suitable for indoor and protected outdoor installation, climate group **moderate** (see page 18) (temperature of coolant $-20^\circ \text{ to } +40^\circ \text{ C}$). For unprotected outdoor installation or severe climatic conditions (moisture category wet, climate group **worldwide**, extremely dusty site conditions, aggressive industrial atmosphere, danger of storm rain and coastal climate, danger of attack by termites, etc.), as well as vertical mounting, special protective measures are recommended, such as:

- Protective cowl (for vertical shaft-down motors)
- For vertical shaft-up motors additional bearing seal and flange drainage
- Special paint finish
- Treatment of winding with protective moisture-proof varnish
- Anti-condensation heating (possibly winding heating)
- Condensation drain holes

The special measures to be applied have to be agreed with the factory once the conditions of installation have been settled.

The corresponding conditions of installation have to be clearly indicated in the order.

TOLERANCES

ELECTRICAL TOLERANCES

For industrial motors to **EN 60034-1**, certain tolerances must be allowed on guaranteed values, taking into consideration the necessary tolerances for the manufacture of such motors and the materials used. The standard includes the following remarks:

- 1- It is not intended that guarantees necessarily have to be given for all or any of the items involved. Quotations including guaranteed values subject to tolerances should say so, and the tolerances should be in accordance with the table.
- 2- Attention is drawn to the different interpretation of the term guarantee. In some countries a distinction is made between guaranteed values and typical or declared values.
- 3- Where a tolerance is stated in only one direction, the value is not limited in the other direction.

Values for	Tolerance
Efficiency (η) (by indirect determination)	- 0.15 ($1 - \eta$) at $P_N \leq 150$ kW - 0.1 ($1 - \eta$) at $P_N > 150$ kW
Power factor ($\cos \varphi$)	$\frac{1 - \cos \varphi}{6}$, minimum 0.02, maximum 0.07
Slip (s) (at rated load and at working temperature)	$\pm 20\%$ of the guaranteed slip at $P_N \geq 1$ kW $\pm 30\%$ of the guaranteed slip at $P_N < 1$ kW
Breakaway starting current (I_A) (in the starting circuit envisaged)	+ 20 % of the guaranteed starting current (no lower limit)
Breakaway torque (M_A)	- 15 % and + 25 % of the guaranteed breakaway torque (+ 25 % may be exceeded by agreement)
Pull-up torque (M_S)	- 15 % of the guaranteed value
Pull-out torque (M_K)	- 10 % of the guaranteed value (after allowing for this tolerance, M_K/M_N not less than 1.6)
Moment of inertia (J)	$\pm 10\%$ of the guaranteed value

MECHANICAL TOLERANCES

According to **IEC 60072-1**, the following tolerances on mechanical dimensions of electric motors are permitted:

Parameter	Code	Tolerance	
Shaft height	H	- up to 250	-0.5 mm
		- over 250	-1 mm
Diameter of shaft end¹⁾	D-DA	- from 11 to 28 mm	j6
		- from 38 to 48 mm	k6
		- from 55 to 100 mm	m6
Hub key width	F-FA		h9
Flange spigot	N	- up to 132	j6
		- over size 132	h6

1) Centerings holes in shaft extension to DIN 332 part 2

MECHANICAL DESIGN

DEGREES OF PROTECTION

Degrees of mechanical protection for machines are designated in accordance with **IEC 60034-5** by the letters IP and two characteristic numerals.

First numeral: Protection against contact and ingress of foreign bodies

Second numeral:
Protection against ingress of water

IP	Description	IP	Description
0	No special protection	0	No special protection
1	Protection against solid foreign bodies larger than 50 mm (Example: inadvertent contact with the hand)	1	Protection against vertically falling water drops (condensation)
2	Protection against solid foreign bodies larger than 12 mm (Example: inadvertent contact with the fingers)	2	Protection against dropping water when inclined by up to 15°
3	Protection against solid foreign bodies larger than 2.5 mm (Example: Wires, tools)	3	Protection against waterspray at up to 60° from vertical
4	Protection against solid foreign bodies larger than 1 mm (Example: Wires, bands)	4	Protection against water splashed from any direction
5	Protection against dust (harmful deposits of dust)	5	Protection against water projected by a nozzle from any direction
6	Complete protection against dust	6	Protection against heavy seas or water projected in powerful jets
		7	Protection when submerged between 0.15 and 1 m.
		8	Protection when continuously submerged in water at conditions agreed between the manufacturer and the user

MECHANICAL DESIGN

MOUNTING ARRANGEMENTS

Mounting arrangements for rotating electrical machines are designated according to IEC 60034-7, Code I (in brackets Code II).

Foot mounting	Flange mounting	Motors without endshield
IM B3 (IM 1001)	IM B5 (IM 3001) Flange type A to DIN 42 948 at drive end	IM B9 (IM 9101) without endshield and without ball bearings on drive end
IM B6 (IM 1051)	IM V1 (IM 3011) Flange type A to DIN 42 948 at drive end	IM V8 (IM 9111) without endshield and without ball bearings on drive end
IM B7 (IM 1061)	IM V3 (IM 3031) Flange type A to DIN 42 948 at drive end	IM V9 (IM 9131) without endshield and without ball bearings on drive end
IM B8 (IM 1071)	IM B35 (IM 2001) Flange type A to DIN 42 948 at drive end	IM B15 (IM 1201) without endshield and without ball bearings on drive end
IM V5 (IM 1011)	IM B14 (IM 3601) Flange type C to DIN 42 948 at drive end	
IM V6 (IM 1031)	IM V18 (IM 3611) Flange type C to DIN 42 948 at drive end	
IM B34 (IM 2101) Flange type C to DIN 42 948 at drive end	IM V19 (IM 3631) Flange type C to DIN 42 948 at drive end	

All standard motors can be installed according to the following mounting arrangements:

Frame Size	B3	B5	B35	Based on B5		Based on B3					Based on B35	
				V1	V3	V5	V6	B6	B7	B8	V15	V36
56-160	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
180-225	✓	✓	✓	✓	*	*	*	*	*	*	*	*
250-315	✓	*	✓	*	*	*	*	*	*	*	*	*

* for high loads refer to us

It is essential to state the desired mounting arrangement when ordering, as the constructive design depends partly on the mounting arrangement.

MECHANICAL DESIGN

MATERIALS

Motor parts	Frame size	Material
Motor housing	56 - 160 180 - 315	Aluminium alloy Cast iron
Endshield	56 - 160 180 - 315	Aluminium alloy* Cast iron
Flanged endshield	56 - 160 180 - 315	Aluminium alloy* Cast iron
Fan cover	56 - 112 56 - 112 132 - 315	Plastics Sheet steel (optional) Sheet steel
Fan	56 - 315 56 - 160	Plastics Aluminium alloy (optional)
Terminal box	56 - 112 56 - 112 132 - 160 180 - 315	Plastics Aluminium alloy (optional) Aluminium alloy Cast iron

* Cast iron option for 112-132

PAINT FINISH

NORMAL FINISH

Suitable for climate group **Moderate** to IEC 60721-2-1, e.g. indoor and outdoor installation.

For short periods: up to 100% rel. humidity at temperatures up to +30° C.

Continuously: up to 85% rel. humidity at temperatures up to +25° C.

Standard paint color: RAL 9005.

SPECIAL FINISH K1

Suitable for climate group **Worldwide** to IEC 60721-2-1, e.g. outdoor installation in corrosive chemical and marine atmospheres.

For short periods: up to 100% rel. humidity at temperatures up to +35° C.

Continuously: up to 98% rel. humidity at temperatures up to +30° C.

MECHANICAL DESIGN

BEARINGS

CLASSIFICATION OF BEARINGS (STANDARD DESIGN)¹⁾

Bearings for standard design have permanent lubrication. Ball bearings to ISO15 (DIN 625).

Frame size	Poles	DE - NDE	Dimension
56	2 + 4	6201-2Z	12x32x10
63	2 + 4	6202-2Z	15x35x11
71	2 - 8	6203-2Z	17x40x12
80	2 - 8	6204-2Z C3	20x47x14
90	2 - 8	6205-2Z C3	25x52x15
100	2 - 8	6206-2Z C3	30x62x16
112	2 - 8	6306-2Z C3	30x72x19
132	2 - 8	6208-2Z C3	40x80x18
160	2 - 8	6309-2Z C3	45x100x25
180	2 - 8	6311 C3	55x120x29
200	2 - 8	6312 C3	60x130x31
225	2 - 8	6313 C3	65x140x33
250	2 - 8	6314 C3	70x150x35
280	2 - 8	6316 C3	80x170x39
315	2	6317 C3	85x180x41
315	4 - 8	NU319 C3 - 6319 C3	95x200x45

1) With regard on bearings for special design, consult us

LUBRICATION

Permanent lubrication up to 160 frame

180 frame up with regreasing facility lubrication nipple is a flat M10x1 to DIN 3404

ROLLER BEARINGS

Roller bearings available as an option. Please consult us.

BEARING ARRANGEMENT

Frame size	Bearing DE	Bearing NDE	Spring-loaded
56 - 160 Standard motors	Non-locating bearing	Non-locating bearing	Non-drive end
63 - 160 Brake motors	Non-locating bearing	Locating bearing	Drive end
180 - 315 Standard motors	Locating bearing	Non-locating bearing	Non-drive end

RELUBRICATION INTERVALS

Relubrication intervals for operating temperatures up to 70° C for 1000HRS

Frame Size	3000 RPM		1500 RPM		1000 RPM		Quantity gr
	Horizontal	Vertical	Horizontal	Vertical	Horizontal	Vertical	
180	4.00	2.00	9.00	4.50	13.00	7.50	15
200	3.50	1.75	8.00	4.00	12.00	6.00	20

280	1.50	0.75	6.50	3.25	9.00	4.50	40
315	1.00	0.50	4.00	2.00	8.00	4.00	55

BELT DRIVE

The data apply only to the normal drive end shaft extension of IM B3 motors with one speed.
Calculation of belt drive:

$$F_R = \frac{19120 \cdot P \cdot k}{D_1 \cdot n}$$

F_R = Radial shaft load in N

P = Output in kW

n = Speed in min⁻¹

D₁ = Pulley diameter in m

k = Belt tension factor, varying with the type of belt, assumed to be approximately:

3-4 for normal flat belt without idler pulley

2-2.5 for normal flat belt with idler pulley

2.2-2.5 for V-belt

For exact data apply to the belt manufacturer.

PERMISSIBLE AXIAL FORCES

Maximum permissible axial forces without additional radial forces*

5) Only with oversized bearing (6308)

6) Special mechanical design

7) Only with oversized bearing (6208)

COOLING

Surface cooling, independent of the direction of rotation.
Motors type AM available without internal fan as type AG, e.g. for installation in a directed air stream (outputs on request).

VIBRATION

The amplitude of vibration in electric motors is governed by **EN 60034-14 Mechanical vibration of rotating electrical machines with shaft heights 56 and larger - methods of measurement and limits**.

Standard motors are designed to vibration grade A (normal). Vibration grade B is available at extra cost.

Rotors are at present dynamically balanced with **half key** fitted as per DIN ISO 8821. Other balancing only on request.

The motors are identified as follows:

"H" or "blank" means balanced with *half key*

"F" means balanced with *full key*

"N" means *no key*

POSITION AND DIMENSIONS OF KEY

Frame size	Poles	d x l1	b x h	l2	l3	t

315	4	80 x 170	22 x 14	160	5	85

Dimensions in mm.

For larger shafts in special design the dimensions l2 and l3 are maintained.

MECHANICAL DESIGN

ANTI-CONDENSATION HEATER

On request, motors which due to strong temperature fluctuations are exposed to condensation during standstill, can be fitted against surcharge with an anti-condensation heater (space heater).

For supply voltage and heater rating please refer to the following table:

Frame size	Supply voltage (V)	Heater rating per motor (W)
112 - 160	110 or 230	25
180 - 225	110 or 230	50
250 - 280	110 or 230	50
315	110 or 230	75

During operation of the motor, the heating must be switched off.

NOISE

The noise level of an electrical machine is determined by measuring the sound pressure level in accordance with curve A of the sound level meter to EN 60651 and is indicated in dB (A).

The permitted noise levels of electrical machines are fixed in EN 60034-9 (IEC 34-9). The noise level of our motors is well below these limit values.

Air-borne sound measurements are carried out in an anechoic testing chamber to EN 21680-ISO 1680.

Speed corresponding to a mains frequency of 50 Hz and the number of poles.

NOISE LEVELS

The noise values listed below refer to 50 Hz at rated voltage with a tolerance of up to + 3 dB(A). Values for pole-changing motors on request. For 60 Hz supply values are 3-5 dB(A) higher.

Sound pressure level L_{WA} and sound power level L_{pA} for three-phase single-speed motors with dimensions and output ratings to IEC 60072

Frame size	2 poles		4 poles		6 poles		8 poles	
	L_{WA}	L_{pA}	L_{WA}	L_{pA}	L_{WA}	L_{pA}	L_{WA}	L_{pA}

315	93	82	89	79	83	71	81	70

ELECTRICAL DESIGN

RATED VOLTAGE

For the rated voltage of the motors, EN 60034-1 allows a tolerance of $\pm 5\%$. According to IEC 60038, the mains voltages may have a tolerance of $\pm 10\%$.

Therefore the three-phase motors are designed for the following rated voltage ranges (exceptions are shown in the data tables):

Mains voltage to IEC 60038	Rated voltage range of motor
230 V $\pm 10\%$	218-242 V $\pm 5\%$
400 V $\pm 10\%$	380-420 V $\pm 5\%$
690 V $\pm 10\%$	655-725 V $\pm 5\%$

Within the rated motor voltage range, the permissible maximum temperature is not exceeded. When the motors are operated at the limits of the voltage tolerance, the permissible overtemperature of the stator winding may be exceeded by 10 K.

Nameplates are marked with the maximum rated currents within the stated voltage ranges.

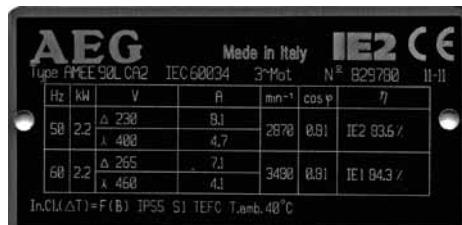

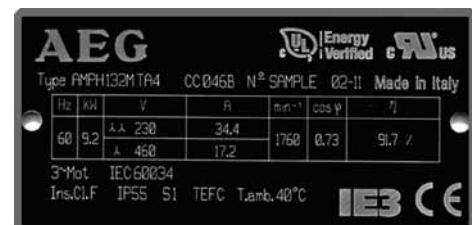

For brake motors, for motors in 500 V, 50 Hz design, and all not standard voltages, no voltage range is marked. The voltage tolerances to EN 60034-1 apply.

RATED FREQUENCY

Three-phase 50 Hz motors can also be operated on 60 Hz mains, provided the mains voltage increases proportionally to the frequency. The relative values for starting and breakaway torque remain nearly unchanged and slightly increase for the starting current. The rated speed increases by the factor 1.2 and output by factor 1.15. Should a motor designed for 50 Hz be operated at 60 Hz without the voltage being increased, the rated output of the motor cannot be increased. Under these operating conditions, rated speed increases by factor 1.2. The relative values for starting and breakaway torque are reduced by factor 0.82 and for starting current by factor 0.9.

Additionally to the voltage range for 50 Hz operation, three-phase single-speed motors (not brake motors) are also marked with the voltage range for 60 Hz operation.

Nameplates examples:

ELECTRICAL DESIGN

RATED CURRENT

For three-phase motors the rated currents listed in the data tables apply to an operating voltage of 400 V. The conversion to other operating voltages, with output and frequency remaining unchanged, is to be made as follows:

Nominal voltage (V)	230	380	400	440	500	660	690
Conversion factor x I_N	1.74	1.05	1.0	0.91	0.80	0.61	0.58

RATED TORQUE

$$\text{Rated torque in Nm} = \frac{\text{Rated power in kW}}{\text{Rated speed in min}^{-1}}$$

OUTPUT

The outputs stated in this catalogue are for constant load in continuous running duty S1 according to EN 60034-1, based on an ambient temperature of 40° C and installation at altitudes up to 1000 m above sea level.

For severe operating conditions, e.g. high switching rate, long run-up time or electric braking, a thermal reserve is necessary, which could call for higher thermal class or the use of a motor with a higher rating. In these cases we recommend to enquire with detailed information on the operating conditions.

OVERLOAD

At operating temperature three-phase motors are capable of withstanding an overload for 15 seconds at 1.5 times the rated torque at rated voltage. This overload is according to EN 60034-1 and will not result in excessive heating.

Utilizing thermal class F, motors can be operated continuously with an overload of 12%. Nevertheless this is not valid for motors which to catalogue are utilized to thermal class F.

CONNECTION

Motor output at 50 Hz	230 V Δ 400 V Y	400 V Δ 690 V Y	500 V Y	500 V Δ	690 V Δ
under 3 kW	standard	on request	on request	on request	-
4 to 5.5 kW	standard	standard	on request	on request	on request
≥ 7.5 kW	on request	standard	on request	on request	on request

ELECTRICAL DESIGN

INSULATION AND TEMPERATURE RISE

Class F insulation to EN 60034-1 is used throughout.

In standard design motors are intended for operation at 40° C ambient temperature with class B temperature rise only, with an overtemperature limit of 80 K. This also applies for the rated voltage range to IEC 60038. Exceptions are shown on the data tables.

Temperature rise (ΔT^*) and maximum temperatures at the hottest points of the winding (T_{max}) according to the temperature classes of EN 60034-1.

	ΔT^*	T_{max}
Class B	80 K	125° C
Class F	105 K	155° C
Class H	125 K	180° C

*Measurement by resistance method

Output reduction at ambient temperatures over 40° C

Ambient temperature	45° C	50° C	55° C	60° C
Class B Reduction of nominal output to approx.	95 %	90 %	85 %	80 %

When a winding is utilized to temperature class F (105K), no output reduction is required up to an ambient temperature of 55° C. This does not apply to motors which in their standard design are already utilized to thermal class F.

Installation at altitudes of more than 1000 m above sea level (see also EN 60034-1)

Altitude of installation	2000 m	3000 m	4000 m
At 40°C ambient temperature and thermal class B Rated output reduced to approx.	92 %	84 %	76 %
At 40°C ambient temperature and thermal class F Rated output reduced to approx.	89 %	79 %	68 %
Full nominal output to data tables with thermal class B and ambient temperature of	32° C	24° C	16° C
Full nominal output to data tables with thermal class F and ambient temperature of	30° C	19° C	9° C

STARTING RATE

The permissible number of starts per hour can be taken as given in the table below, provided the following conditions are met.

Additional moment of inertia \leq moment of inertia of the rotor: load torque rising with the square of the speed up to nominal torque; starts at even intervals.

Shaft height	Permissible no. of starts per hour for		
	2 poles	4 poles	≥ 6 poles
56 - 71	100	250	350
80 - 100	60	140	160
112 - 132	30	60	80
160 - 180	15	30	50
200 - 225	8	15	30
250 - 315	4	8	12

For permissible number of starts for pole-changing motors and brake motors please consult us, indicating the complete operating conditions.

For the motors AMME and AMDE series, time between stop and restart of the motor must be higher than 15 s.

THERMAL PROTECTION

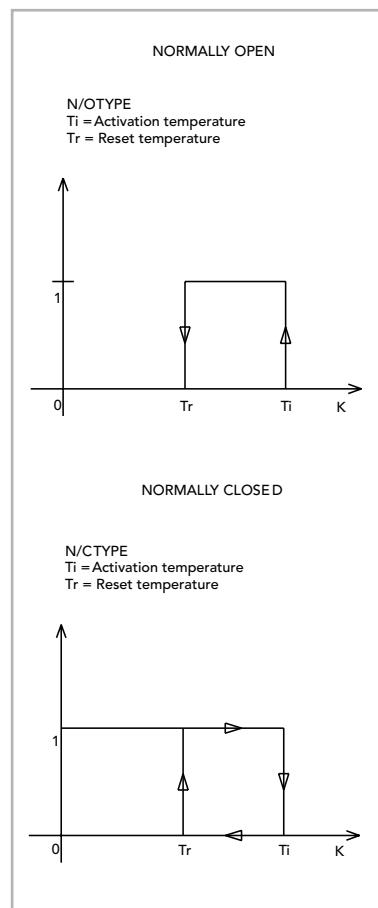

The decision on a particular type of thermal protection should be taken according to the actual operating conditions. Motors may be protected by means of current-dependent thermal protection switches, overcurrent relays and temperature detectors.

Thermal protection is possible as follows:

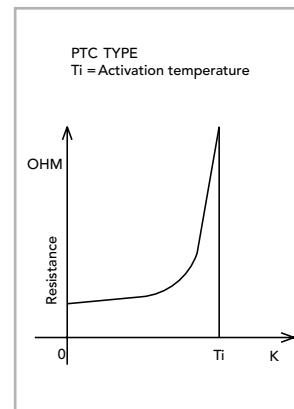

- Thermal protection switch with bimetal release
- Thermistor protection with semiconductor temperature detectors (PTC) in the stator winding in connection with release (if required, with additional motor protection switch).
- Bimetal temperature detector as N/C or N/O in the stator winding (if required, with additional motor protection switch).
- Resistance thermometer for monitoring winding and bearing temperature.

Should protection of the motor be required, we install protection switch with bimetal release (semiconductor temperature detectors on request).

Moment of inertia (J_{ext}) referred to the motor shaft: kgm^2
Description of the type of drive (direct coupling, flat or V-belt, straight or helical gears, sprocket, crank, eccentric cam, etc.)
Radial force (or diameter of drive element): N
Direction of force and point of application (distance from shaft shoulder or width of drive element): mm
Axial force and direction of application (pull/thrust): N
Ambient conditions (e.g. increased humidity, dust accumulation, corrosive gases or vapours, increased or extremely low ambient temperature, outdoor installation, installation at altitudes over 1000 m above sea level, external vibration, etc.)

THREE-PHASE MOTORS

TERMINAL BOX

The location of the terminal box in standard design is on top; on the right or on the left are possible.

Motors 71-160 frame size have removable feet for easy change of terminal box position

For motors with mountings IM B6, IM B7, IM B8, IM V5, IM V6 the location of the terminal box is related to an IM B3 mounting.

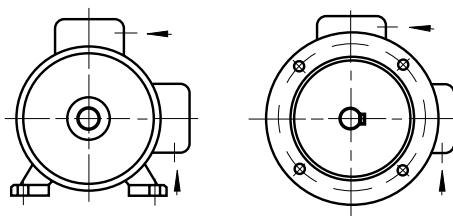

The position of the entry openings can be adjusted to suit the existing connection facilities by turning through 90°. Should special accessories be used (temperature detectors, anti-condensation heating, etc.) please enquire.

For motors in standard design, the cable gland does not belong to our scope of delivery.

For plastic terminal boxes, only plastic glands may be used (shock protection).

When using screened leads, a metal terminal box is required.

ELECTRICAL DESIGN

CONNECTION DIAGRAMS

Windings of standard three-phase single speed motors can be connected either in star or delta connection.

STAR CONNECTION

A star connection is obtained by connecting W2, U2, V2 terminals to each other and the U1, V1, W1 terminals to the mains. The phase current and voltage are:

$$I_{ph} = I_n ; U_{ph} = U_n / \sqrt{3}$$

where I_n is the line current and U_n the line voltage referred to the star connection.

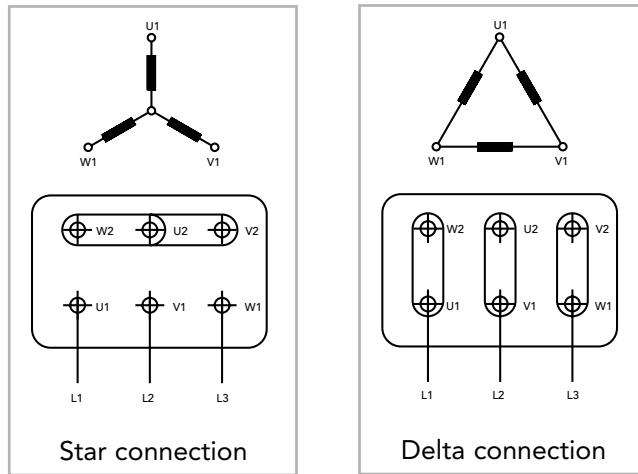

DELTA CONNECTION

A delta connection is obtained by connecting the end of a phase to the beginning of the next phase.

The phase current I_{ph} and the phase voltage U_{ph} are:

$$I_{ph} = I_n / \sqrt{3} ; U_{ph} = U_n$$

where I_n and U_n are referred to the delta connection.

STAR-DELTA STARTING

Star-delta starting allows a peak current reduction. It can be used only when the reduced starting torque obtained is higher than the resistant torque. Actually, it should be noted that the torque of an induction squirrel-cage motor is directly proportional to the square of the voltage. Motors whose rated voltage with delta connection corresponds to the mains voltage, can be started with the star-delta method.

All motors can be supplied with windings designed for star-delta starting (for example: 400 V Δ / 690 V Y).

TWO SPEED MOTORS

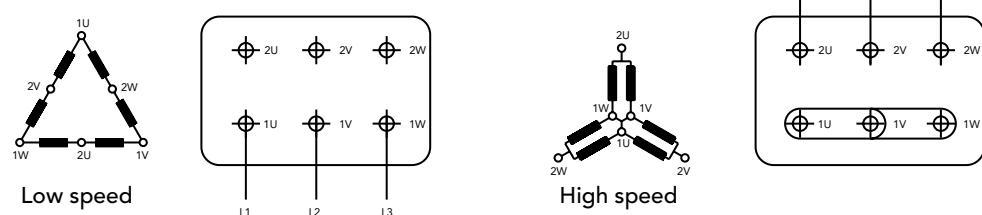

Standard pole-changing motors are designed for single voltage and direct-on-line starting.

When the ratio between the two speeds is from 1 to 2, the standard motors have one single winding (Dahlander connection). For the other speeds, the motors have two separate windings.

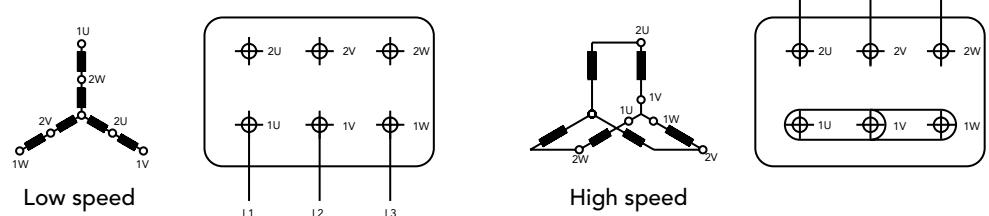

AM/AMV - two separate windings

AM - Dahlander connection Δ/YY

AMV - Dahlander connection Y/YY

CAGE MOTORS DRIVEN BY FREQUENCY CONVERTERS

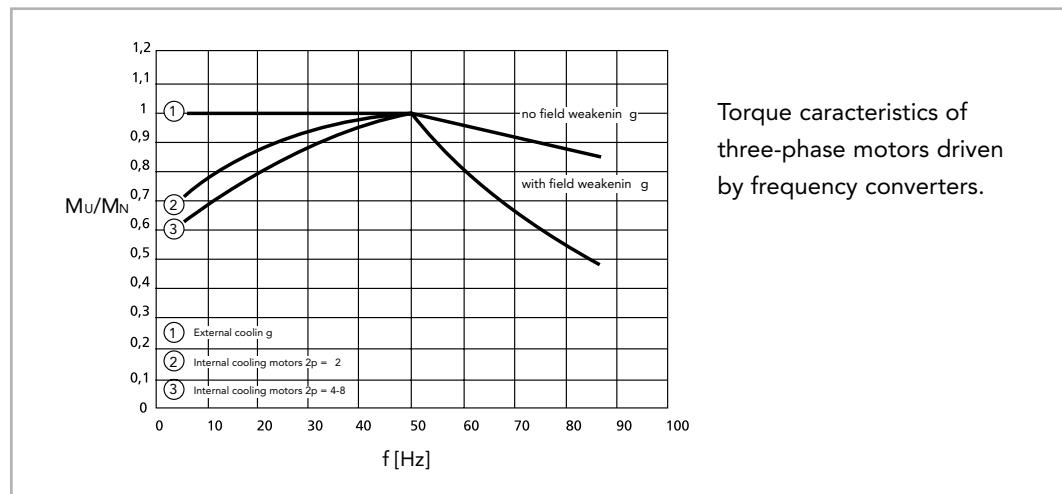

Motors frame sizes 90 upwards in standard design are suitable for operation on static frequency converters, taking into account the following remarks:

- Maximum converter output voltage 500V at peak voltages $\hat{U} \leq 1460V$ and $dU/dt \leq 13\text{ kV/us}$. For higher converter output voltages or stresses, a special insulation is required.
- With square characteristic of the load torque, motors can be driven with their rated torque.
- For constant torque, the rated torque of motors with internal cooling must be reduced due to reduced cooling air inlet. Depending on the control range, the use of an external fan would be advisable.
- The motors frame sizes 90 – 112 are suitable for a maximum output frequency of the converter of 60 Hz (e.g. applications with square torque, control range 1:10, such as pumps and fans). For higher frequencies, a special range with type designation AMI is available on request. From frame size 132 upwards, motors designed $\Delta/Y 230/400\text{ V}, 50\text{ Hz}$ can be operated in delta with a maximum frequency of 87 Hz (observe mechanical limit speed).

The motors frame size 56 – 80 can be operated on single-phase converters up to maximum 60 Hz. (Special range with type designation AMI for operation on three-phase converters with output voltage $\geq 400\text{ V}$ and output frequency $> 60\text{ Hz}$).

The electrical values and dimensions of the range AMI in frame size 56 to 112 are identical to AM motors (see data tables pages 50-52).

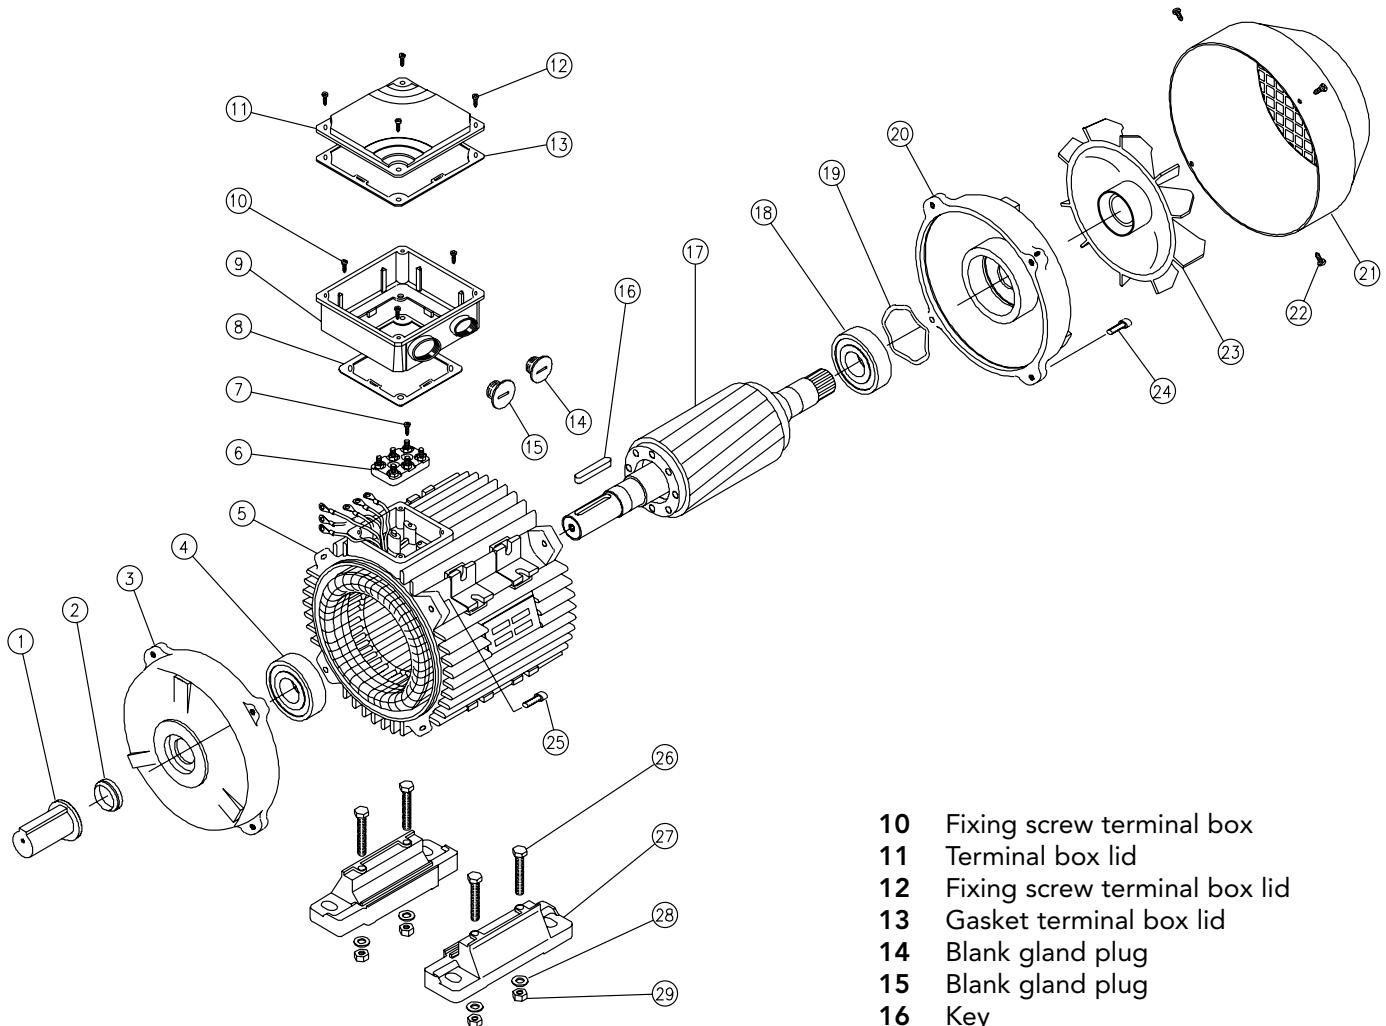

Note: 75 kW, 2 poles and up - insulated bearing are recommended when inverter fed.

NOISE

Depending on the operating point and converter type, converter-fed motors produce between approx. 4 - 10 dB(A) higher noise values than when supplied from the mains. For motors driven with a frequency over 50 Hz, more fan noise is produced. We recommend the use of an external fan.

SPARE PARTS

Only motors 71-160 frame size have removable feet for easy change of terminal box position

In enquires and orders for spare parts please state always:

Designation of spare part, motor type, mounting arrangement, motor serial number (Product No. when available)

Enquires and orders cannot be handled without these data.

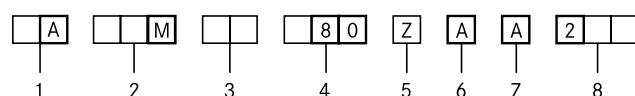

TYPE DESIGNATION

Apart from other information, it is necessary to specify the exact type designation in all enquiries, when ordering spare parts or replacement motors or when asking for documentary information.

The type designation of our motors comprises 8 points of reference, each of which may consist of several letters and/or numerals. The meaning of each symbol can be seen from the following table. For motors not included in our standard range, special symbols may be used which are not listed here.

Ref.	Meaning point	Description of symbols used for our motors	
1	Type of motor	A	Asynchronous motor
2	Cooling	M G MFV	Surface cooled with external fan, cooling fins Surface cooled without external fan, cooling fins Surface cooled with forced ventilation, cooling fins
3	Type of motor	blank EE H HE PE PH V I	Three-phase motor, standard efficiency IE1 code Three-phase motor, high efficiency IE2 code Three-phase motor, efficiency to EPACT regulations Three-phase motor, high efficiency IE2 code 50 - 60 Hz Three-phase motor, premium efficiency IE3 code Three-phase motor, premium efficiency EISA regulations Three-phase two speed motor for driving fans Special design for three-phase motor driven with frequency converter
4	Shaft centre height	56, 63, 71, 80, 90, 100, 112, 132, 160, 180, 200, 225, 250, 280, 315	
5	Frame length	Z S M L	Mechanical dimension (short) Mechanical dimension (medium) Mechanical dimension (long)
